Dear Dan,

I would first like to tell you how much our school district loves all of the Help Me 2 Learn products.

From the teacher standpoint I loved to use the program with all of my students. It is amazing to watch them learning their sounds when they believe that they are competing in a game or learn how to build compound words. The teachers in my school loved the fact that I could print off reports that went along with their report cards and standards. Help Me 2 Learn has also been beneficial for helping our student achieve higher test scores on their standardized testing and reading comprehension.

I have now moved to the Technology Administration side of our school district.

This has allowed me to see the back side of the program and realize once again what a great program that Help Me 2 learn is. The installation process is very easy to use and user friendly. The service that is provided is amazing if there are ever any problems you have always been there to help.

Thank you for making such a wonderful program that can help so many children succeed in their education.

Sincerely,  
Beth Colbert
